

*"Our mission is to empower organizations through software innovation and training."*

## INTRODUCTION

Digital Treasure is a global software consulting company that was founded in 2003 and has subsidiaries in Botswana, South Africa, Zambia, and Zimbabwe. The company provides turnkey solutions in Software development, Multimedia content development, Data analytics and Technology human capital development across the African continent and beyond.

Our mission is to empower organizations through software innovation and training. Our Vision is to become one of the leading technology and human capital development brands in Africa by 2030. Our values include practicing sound business ethics, teamwork, and innovation and operating in accordance with the highest standard in all relationships with employees, clients, suppliers, the environment, and the community.

## OUR SERVICES

### System Requirements

Our Systems and Business Analysts help organisations, be they private, government or not-for-profit, to prepare system requirements/blueprint and tender documents for use in procuring off-the-shelf software packages or development of new business applications.

### App Development

We transform customer's user and business requirements into ready to use software apps using modern tools and technologies. Our service includes mobile and web applications as well as databases and dashboards. We can start a project from scratch or customise existing software packages if source code is available.

### Software Testing

When procuring customised or new software systems, organisations should perform user acceptance testing (UAT) to validate that the product is fit for use. Managing UAT process can be complex and daunting. Our experienced consultants have developed automation tools and methodologies to execute UAT's flowlessly.

### Systems Integration

Most organisations run multiple specialised software systems for various use cases which need to exchange data as part of business processes or for reporting purposes. We have experience in designing, implementing and supporting data exchange projects using standards-based tools

### Data Migration

When you deploy new system, it is necessary to permanently move data from an old system or electronic files or even hardcopy forms to the new system as part of system take-on. This process involves data Extraction, Transformation and Loading (ETL) in the new system. You can trust our company to handle this data migration process for you.

## OUR SERVICES

### Data Analytics

In recent years data has become the most critical asset of an organisation. Drawing insights and making decisions based on data can give organisations a competitive edge and increase operational efficiency. We have experts to help your organisation become data aware and guide your organisation to collect, prepare and analyse data to solve business challenges

### Project Management

Successful implementation of ICT projects require specialist skill in managing time, risk and cost. We have certified project management professionals who use tried and tested methodologies to manage your ICT project from inception to launch.

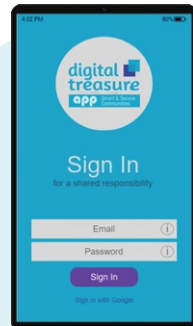

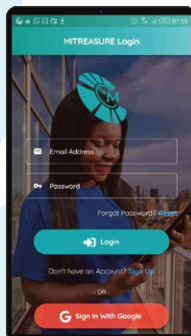

### Web Hosting

We have computer servers within Zambia and outside for hosting your websites, business applications and databases. Our hosting service includes the server space, application setup and support, as well as data backup and security.

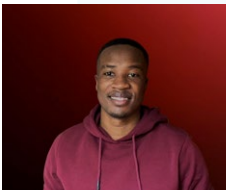

### Software Sales

We sell software licenses for our own-developed software as well as from other vendors like Microsoft and IBM. Our own off-the-shelf packages include UAT management tool, Loans and Savings Management software and Bureaux de-change software among others.

## SOFTWARE SOLUTIONS

Software	Description
<b>Digital Treasure App</b>	Mobile app platform that enables individuals and organizations to secure, trace and manage electronic gadgets including Smart TVs, Laptops, Desktop PCs, Smartphones, and anything with a serial number. It manages a database of device serial number to owner ID thereby helping in recovery of lost or stolen property and ultimately to reduce theft and selling of such products in communities.
<b>LoanEase</b>	LoanEase is a micro-finance business software for managing loans and savings operations. The software was developed to help micro-finance businesses to increase revenue, minimize costs and increase operational efficiency.
<b>FX Trader</b>	FX (Foreign eXchange) Trader is a complete and integrated foreign currency trading software solution developed for the Bureau de-Changes and banks in Africa, empowering them to sustain high volume trade processing and volume growth.
<b>WasteTracker</b>	WasteTracker is a RFID (Radio Frequency Identification) technology enabled healthcare waste management software for tracking risk clinical waste container (BIN)s movements from the time it enters a health facility until its waste contents are treated at a waste treatment plant. The system enables reconciliation of individual or batched bins' weight figures recorded by the facility and those received at the treatment plant.
<b>Contracts Manager</b>	Contracts Manager (CM) is an enterprise wide, web-based contracts management software developed to help organizations to efficiently keep track contracts information and provides early warning alerts on key contract events like expiration date, review date, payments etc. It also tracks other contracts related information like vendor information and tasks. Many reports can be produced which can be used for budgeting and audits.
<b>MessageWeb</b>	SMSWeb Application Software is a web-based software for sending, receiving and managing Short Text Messages. With SMSWeb, an organisation can rapidly broadcast personalised, branded messages to individuals or groups of contacts at reduced costs. There are also facilities for easy management of two-way communication such as opinion polls and surveys thereby reducing the turnaround time for these otherwise time-consuming activities.
